NARRATIVE OF SPECIAL FUNDS DETAIL AND TREASURY FUND/BANK ACCOUNTS

MS State Univ - Agricultural & Forestry Experiment Station (422-00)

Name of Agency

STATE SUPPORT SPECIAL FUNDS

Education Enhancement funds are authorized by Mississippi Code $\$37 \square 61 \square 33$ (see also Sections 27-65-75(7) and (8) and 27-67-31(a) and (b) defining the revenue source of Education Enhancement funds) and are used for general support of the MAFES research mission.

FEDERAL FUNDS

MAFES receives three federal funds sources (knows as Capacity Grants) as follows:

Hatch Regular Funds: Hatch Regular Funds are allocated by formula to all 50 states and are to promote the efficient production, marketing, distribution, and

utilization of products of the farm as essential to the health and welfare of our peoples and to promote a sound and prosperous agriculture and rural life as indispensable to the maintenance of maximum employment and national prosperity and security.

Hatch Multistate Funds: Hatch Multistate Funds are a subset of Hatch funding intended to conduct research by institutions within a State and by institutions in multiple States to solve problems that concern more than one State. The agricultural focus of the research is the same as the Hatch Regular Funds above.

Animal Health Funds: By formula, MAFES is awarded funds to conduct animal health and disease research in accordance with NARETPA section 1433(c).

OTHER SPECIAL FUNDS

MAFES Sales and Services represent the sale of byproducts from research activity. Also included here is expenditure authority in excess of anticipated expenditures as required by IHL.

Program Data Collected in Accordance with the Mississippi Performance Budget and Strategic Planning Act of 1994 (To Accompany Form MBR-1-03)

MS State Univ - Agricultural & Forestry Experiment Station 1 - Plant Systems Name of Agency Program Name

I. Program Description:

Mississippi farmers manage 10.7 million acres of farmland across 36,200 farms, producing plant-based food and fiber crops with a farm gate value of \$2.8 billion. In 2017, the top 4 row crops (soybeans, corn, cotton, and sweet potatoes) alone had a production value over \$2.1 billion. Investments in agricultural research have produced astounding gains in efficiency and yield, making the U.S. agricultural system among the most productive in the world. However, new challenges continually confront producers necessitating both responsive and preemptive research programs to maintain competitive and profitable production systems. Technological capabilities in molecular methods, proteomics, and genomics provide researchers an arsenal of tools against pathogens, viruses, parasites, and fungi that weaken plants, rob yield, and compromise food quality and safety. Marker-assisted breeding programs may provide the drought and heat tolerant crops needed to face future climate uncertainty. Sophisticated watershed modeling tools coupled with engineered water delivery systems and irrigation scheduling tools can help producers more efficiently conserve increasingly scarce water resources. Biotechnology has come to play a central role in agriculture, producing crops with desired qualities (herbicide tolerance, disease and pest resistance) and providing alternative uses of commodities (biofuels, pharmaceuticals, value-added products, etc).

PRODUCTION: Plants are essential to human diets and enliven and sustain the environment. Farmers are challenged with producing sufficient crops to meet growing consumer demand while maintaining the quality and quantity of resources for future generations. MAFES Scientists develop research-based technologies to help farmers increase productivity and production efficiency while practicing sustainable agriculture. Agronomic crops provide the food, feed grain, oil, and fiber for domestic consumption and are a major component of U.S. export trade. Horticultural plants, both ornamental and fruit and vegetable crops, offer variety to human diets and enhance the living environment.

PEST MANAGEMENT: Crop protection is essential for high-yield production. Diseases, parasites, pathogens, insects, and weeds can cause costly and irreparable harm to livestock and crops. Crop damage from pests results in vast economic consequences. They threaten the health of our nation's vital agricultural, natural lands, and urban areas. Methods to manage these problems include the use of pesticides or biological pest control. Integrated pest management (IPM) couples both methods and includes monitoring to reduce the overuse of pesticide applications. Research aims to develop and extend effective, affordable, and environmentally-sound control strategies.

BREEDING: Plant breeding — the science of maximizing plants' positive genetic traits to produce desirable effects —continues to open new frontiers in agricultural production. Advancements in plant genetics and genomics, when used in breeding, help support higher production and cultivation of crops resistant to pests, pathogens, and drought. Science must continue to advance to meet challenges created by evolving plant pests and pathogens, global climate change, and changing societal needs.

PLANT HEALTH: Healthy plants are able to grow and produce in the face of environmental stress, pests, and competition. The nation's food supply relies upon healthy, productive crops. A range of variables affect plant health, including the surrounding environment and the extent to which they are protected from pests and disease. Healthy plants are vital to sustainable and profitable crop production and to the quality and cost of the nation's supply of food, fuel, and fiber. Health is also critical to plants used for ornamentals, natural resources, and animal feed. Scientists are using innovative methods to breed more productive and nutritious crops. Advances in breeding and genetics are allowing farmers to grow plant varieties that are healthier and more resilient to drought and losses from pests and diseases.

Areas of focus will include development of production systems that optimize yield, energy efficiency, profitability, and environmental stewardship.

- 1. Commodity Cropping systems
- 2. Specialty Cropping systems
- 3. Fruits and Vegetables
- 4. Turf grass and Ornamentals
- 5. Climate Change Adaptation/Mitigation
- 6. Agricultural Policy, Economics and Risk Management
- 7. Biotechnology, Genomics, and Proteomics

II. Program Objective:

Program Data Collected in Accordance with the Mississippi Performance Budget and Strategic Planning Act of 1994 (To Accompany Form MBR-1-03)

- 1. To increase the global competitiveness of the Mississippi plant production systems
- 2. To make advances in plant breeding, including new varieties and plant related commodities
- 3. To make advances in plant system productivity and production
- 4. To research and identify appropriate and safe use of pesticides
- 5. To identify threats from pests and diseases
- 6. To cultivate sustainable practices that protect the environment while fostering farm productivity
- 7. To recruit and educate a diverse set of individuals for careers as future scientists, professionals, and leaders who are well-trained in agricultural sciences
- III. Current program activities as supported by the funding in Columns 6-15 (FY 2019 & FY 2020Increase/Decrease for continuations) of MBR-1-03 and designated Budget Unit Decisions columns of MBR-1-03-A:
- (D) Recover FY2016 Appropriations:

The MAFES request for FY 2020 includes recovering the funds lost since the original FY 2016 Appropriation. These funds are both programmatic and operational and support all aspects of the MAFES mission.

(E) PERS Increase:

This request will cover the employer share increase - 1.65% effective July 1, 2019 - in support of the Public Employees' Retirement System (PERS).

(F) Health Plan Increase:

This request will cover the balance (½) of the increase in the employer share premium of the State and School Employees Health Insurance Plan (from \$356 to \$375(\$19 per month)) that will take effect January 1, 2019.

Program Data Collected in Accordance with the Mississippi Performance Budget and Strategic Planning Act of 1994 (To Accompany Form MBR-1-03)

MS State Univ - Agricultural & Forestry Experiment Station 2 - Animal Systems
Name of Agency Program Name

I. Program Description:

Efficient, science-based animal agriculture translates into affordable and high-quality food for the consumer. In 2017 Mississippi produced 746 million chicken broilers worth \$2.52 billion on 1,430 farms; 890,000 head of cattle worth \$285 million on 15,940 farms; \$181 million in catfish production on 155 operations; and 570,000 hogs worth \$117 million across 306 farms. The total farm gate value of animal production systems in Mississippi exceeded \$3.4 billion in 2017. Modern animal production systems provide unprecedented efficiency in producing high quality, nutritious, safe, and affordable meats, eggs, and dairy products to consumers throughout Mississippi, the nation, and the world. However, volatile feed and energy costs, emerging diseases, global markets, and regulatory constraints continually challenge Mississippi producers. Research conducted by MAFES on nutrition, forage management, animal health and welfare, physiology, herd genetics, animal performance, marketing, and enterprise economics help Mississippi producers to be profitable and competitive in a

PRODUCTION: Raising livestock and producing animal products is a multi-billion-dollar-per-year industry and a significant part of U.S. agriculture. Research activities evolve to address new challenges and opportunities brought about by rapidly advancing technologies, evolving consumer demand, and the need to improve environmental, human, and animal health and well-being. Animals and livestock contribute 40 percent of the global value of agricultural output, supply about 13 percent of energy and 28 percent of protein in diets consumed worldwide, and contribute to the livelihoods and food security of almost a billion people worldwide. Advances in animal breeding, genetics, and genomics are facilitating a more efficient industry and better livestock products. Technological advances and the development of science-based management practices and standards have enabled the United States to make vast strides in the efficient and economical generation of higher-quality animal foods and fiber products. A rapidly growing sector of agriculture, aquaculture is expected to provide almost two-thirds of the fish intended for global consumption by 2030. Interest in aquaculture production is on the rise because wild harvest of many seafood species is currently at or above maximum sustainable levels. Advancing the development of aquaculture presents one viable solution to this challenge, offering a wide range of benefits.

BREEDING: Animal breeding, genetics, and genomics is the branch of science concerned with maximizing desirable genetic traits, such as producing animals that have leaner meat. Animal geneticists have identified elements within genes that can enhance animal growth, health, and ability to utilize nutrients. These genetic advances can increase production while reducing environmental impacts.

HEALTH: Monitoring animal health and preventing animal disease outbreaks is vital to the economy and safety of the country's food supply. Production of healthy livestock helps to ensure a safe food supply and keep consumer prices stable. The health and quality of livestock is influenced by genetics, care, nutrition, and environment. The quality of animal products is affected by production methods and marketing practices. Scientists study the conditions in which animals are raised as well as how animal products are manufactured and marketed.

Animal-related programs which cover beef cattle, dairy cattle, poultry, and aquaculture employ multi-disciplinary approaches and the integration of research with our partners in education and extension. These activities are focused on approaches that are economically sound, socially acceptable, and environmentally sustainable. Our animal programs contain animal reproduction, nutrition, genetics, physiology, environmental stress, product quality, management, health, well-being, and security.

Areas of focus will include development of efficient, cost-effective, and humane animal production systems that optimize environmental stewardship.

- 1. Animal Nutrition
- 2. Herd, Flock, and Pond Management Systems
- 3. Reproductive and Stress Physiology
- 4. Animal Breeding and Genetics
- 5. Biotechnology and Genomics
- 6. Agricultural Policy, Economics, and Risk Management

global economy while ensuring sound environmental stewardship.

7. Waste Management and Water Quality

II. Program Objective:

Program Data Collected in Accordance with the Mississippi Performance Budget and Strategic Planning Act of 1994 (To Accompany Form MBR-1-03)

- 1. To improve access to an affordable, healthful, and culturally relevant food supply
- 2. To improve livestock breeds by identifying and selecting for desirable traits
- 3. To identify animal diseases and lead efforts in determining response
- 4. To improve animal well-being
- 5. To increase farm productivity and profitability
- 6. To improve food safety by detecting and eliminating foodborne pathogens
- 7. To reduce environmental impacts
- 8. To enhance the production and efficiency of aquaculture operations
- III. Current program activities as supported by the funding in Columns 6-15 (FY 2019 & FY 2020Increase/Decrease for continuations) of MBR-1-03 and designated Budget Unit Decisions columns of MBR-1-03-A:

(D) Recover FY2016 Appropriations:

The MAFES request for FY 2020 includes recovering the funds lost since the original FY 2016 Appropriation. These funds are both programmatic and operational and support all aspects of the MAFES mission.

(E) PERS increase:

This request will cover the employer share increase - 1.65% effective July 1, 2019 - in support of the Public Employees' Retirement System (PERS). This brings the employer share from 15.75% to 17.4%.

(F) Health Plan Increase:

This request will cover the balance (½) of the increase in the employer share premium of the State and School Employees Health Insurance Plan (from \$356 to \$375(\$19 per month)) that will take effect January 1, 2019.

Program Data Collected in Accordance with the Mississippi Performance Budget and Strategic Planning Act of 1994 (To Accompany Form MBR-1-03)

Name of Agency

Program Name

I. Program Description:

The capacity to learn and to contribute to society is traced directly to the quality of health and nutrition from prenatal status through adulthood. Assuring a healthy, well-nourished population requires continuing effort toward development of quality research information on nutrient function for maintenance of optimal health, understanding the availability and bioavailability of food for all population groups, especially those at greater risk for nutrition-related diseases, e.g., infants, elderly, new immigrant groups. Nutrition education can incorporate research information in a form that is appropriate to each of these segments of the population. Education should include knowledge of how to secure foods to provide adequate nutrition to families with a commitment to dietary guidelines. Healthy diets minimize illness and disease and reduce medical costs. Uses of foods to prevent diseases (e.g., functional foods) and the production of pharmaceuticals and nutraceuticals from plants are new areas within nutrition research that need to be targeted for support.

HEALTH: MAFES researches and disseminates findings to help Mississippians make informed choices. The overall health of Americans is threatened by growing obesity levels that lead to increased risk of heart disease, diabetes, stroke, and certain types of cancer.

NATURAL RESOURCES: Air, water, and soil are fundamental components of life, so abundant that people may take their existence for granted. However, understanding the full composition and functions of these elements continues to challenge scientists. The dynamics between these basic building blocks and the nation's forests, grasslands, and rangelands comprise delicate ecosystems critical to sustainable agriculture.

WATER: In the face of a rapidly rising population and agriculture's high demand, the nation is working to ensure future supplies of water are safe and abundant. Water quality is equally as important as quantity. MAFES scientists work to identify and mitigate impairments to Mississippi's streams, lakes, rivers, and coastal waters so that these bodies provide the environmental and social services upon which our citizens and communities depend.

COMMUNITIES: Strong communities create a more stable and supportive society, and members report that they lead happier and healthier lives.

FOOD SAFETY AND QUALITY: Research addresses the ongoing challenge of ensuring access to safe, high-quality food at reasonable prices. This program strengthens Mississippi's capacity to meet demands for safe, nutritious, convenient, and globally competitive food.

ECONOMICS: Research that helps farmers and agricultural businesses effectively manage operations and remain profitable and economically sustainable.

II. Program Objective:

- 1. To optimize the health of consumers by improving the quality of diets, the quality of food, and the number of food choices
- 2. To develop innovative processing technologies to extend shelf life, enhance safety and improve the nutritive quality of foods
- 3. To reduce food causes of food-borne illness such as pathogens, toxins, and chemical contaminants
- 4. To help individuals, families, and communities make informed choices about food and lifestyles
- 5. To promote healthy child and family development
- 6. To promote health, safety, and access to quality health care
- 7. To develop and validate best management practices to conserve water usage and enhance water quality
- 8. To improve production efficiency and resource conservation
- 9. To provide science-based information to facilitate risk management
- 10. To enhance the economic sustainability of individuals, families, agricultural enterprises, and communities
- III. Current program activities as supported by the funding in Columns 6-15 (FY 2019 & FY 2020Increase/Decrease for continuations) of MBR-1-03 and designated Budget Unit Decisions columns of MBR-1-03-A:

Program Data Collected in Accordance with the Mississippi Performance Budget and Strategic Planning Act of 1994 (To Accompany Form MBR-1-03)

(D) Recover FY2016 Appropriations:

The MAFES request for FY 2020 includes recovering the funds lost since the original FY 2016 Appropriation. These funds are both programmatic and operational and support all aspects of the MAFES mission.

(E) PERS Increase:

This request will cover the employer share increase - 1.65% effective July 1, 2019 - in support of the Public Employees' Retirement System (PERS). This brings the employer share from 15.75% to 17.4%.

(F) Health Plan Increase:

This request will cover the balance (½) of the increase in the employer share premium of the State and School Employees Health Insurance Plan (from \$356 to \$375(\$19 per month)) that will take effect January 1, 2019.

Legislative Budget Request 2019-20

MAFES' Role

Agriculture is one of Mississippi's largest industries generating \$7.5 billion in farm gate value, nearly \$9 billion in income (16% of the state's total), \$16.3 billion in economic impacts (17% of state total), and supporting 18% of the state's workforce. Today, the agricultural sector faces unprecedented challenges, operating in global markets and striving to meet global food demands projected to increase 50-100% by 2050. Mississippi producers face uncertainties associated with changing farm policy, market volatility, ever increasing regulatory burdens, climate change, emerging technologies, water availability and utilization, and environmental stewardship. There is no more important issue facing the agricultural community than the development and implementation of economically and environmentally sustainable food, fiber and energy production systems. Science-based solutions are those most likely to bring about transformative change in this evolving industry.

The Mississippi Agricultural and Forestry Experiment Station (MAFES) at Mississippi State University is Mississippi's primary agricultural research entity, developing technologies, crop varieties, and production practices to enhance economic efficiency and environmental sustainability for Mississippi farmers and ranchers.

MAFES scientists, working on behalf of the citizens of the state of Mississippi, develop and deliver emerging technologies to agricultural producers, bridging the gap between science and application.

MAFES developed technologies are relevant to Mississippi, improve the economics of rural communities, and enhance the health and well-being of all citizens.

MAFES' success in its support of the citizens of the State of Mississippi is dependent on sufficient resources to allow continuing research for their benefit. Presented in this budget request is our need for increased scientific capacity and core operations.

MAFES has a statewide presence allowing us to serve the people and solve agricultural problems presented in each region of the state. With four Research and Extension Centers and 16 branch stations our costs of utilities and facilities maintenance are significant.

MAFES produces:

- *Knowledge* that leads to innovation within the agricultural industry and informs producer decision-making on the farm.
- Solutions that are regionally relevant through site-specific research conducted at our 16 branch locations throughout the state.
- Best practices to help Mississippi agricultural producers increase efficiency, enhance environmental stewardship, and comply with state and federal regulations.

MAFES also:

- *Partners* with our academic counterpart, the College of Agriculture and Life Sciences, in the training of future agricultural scientists and leaders.
- *Coordinates* with other higher education institutions regionally to work together toward resolution of common regional issues.
- Responds to emerging agricultural issues with a staff of exceptional scientists.
- *Transfers* effectively research outcomes to producers, commodity groups, and industry through partnership with MSU-Extension Service

MAFES is:

- An economic engine for an agricultural-dependent economy.
- A 2013 study by the Batelle Institute reported that the Mississippi Agricultural and Forestry Experiment Station had an economic impact on the state of Mississippi of \$110.8 million and support more than 2000 jobs.

MAFES' Request

The MAFES FY2019-20 Legislative Budget Request reflects our needs in three critical areas:

Recovery of FY 2016 Appropriations – The MAFES request for FY 2020 includes recovering the funds lost since the original FY 2016 Appropriation. These funds are both programmatic and operational and support all aspects of the MAFES mission.

Requested: \$1,935,407

PERS Increase -- This request will cover the employer share increase - 1.65% effective July 1, 2019 - in support of the Public Employees' Retirement System (PERS). This brings the employer share from 15.75% to 17.4%.

Requested: \$281,059

Health Plan Cost Increase -- This request will cover the balance (½) of the increase in the employer share premium of the State and School Employees Health Insurance Plan (from \$356 to \$375(\$19 per month)) that will take effect January 1, 2019.

Requested: \$18,755

The requested funds are needed to allow MAFES to maintain its research capacity in agricultural production related to row crops, food production and security systems, and family nutrition.

Such research will improve the profitability, prosperity of farms and farm families; and thus, enhance the economic development of Mississippi's rural communities associated with agriculture and forestry. The funds, if made available, would assist in the development of new farm practices and technologies which will be implemented to stimulate our rural economies, protect and conserve resources, and improve the quality of life for all citizens.

TOTAL MAFES Request 2019-20: \$2,235,221

Additional funding to <u>BUILD RESEARCH CAPACITY</u> in addition to the requested recovery and mandatory increases (PERS and Health Plan) <u>significant</u> benefit to the state's agricultural industry.

In Crop Production - Mississippi farmers manage 10.7 million acres of farmland across 36,200 farms, producing food and fiber crops with a farm gate value of \$7.5 billion. In 2017, the top 4 row crops (soybeans, corn, cotton, and rice) alone had a production value of \$2.1 billion. Investments in agricultural research have produced astounding gains in efficiency and yield, making the U.S. agricultural system among the most productive in the world. However, new challenges continually confront producers necessitating both responsive and preemptive research programs to maintain competitive and profitable production systems. Precision agricultural technologies empower producers to develop and implement spatially explicit seeding, fertility, and crop protection prescriptions, potentially optimizing inputs, costs, and yield; however, producer ability to collect information exceeds their capacity to manage, process, and analyze. MAFES precision agriculture programs are helping producers to turn data into decisions, enhancing profitability and environmental stewardship. Biotechnology has come to play a central role in agriculture, producing crops with desired qualities (herbicide tolerance, disease and pest resistance) and providing alternative uses of commodities (biofuels, pharmaceuticals, value-added products, etc.). Technological capabilities in molecular methods, proteomics, and genomics provide researchers an arsenal of tools against pathogens, viruses, parasites, and fungi that weaken plants, rob yield, and compromise food quality and safety. Marker-assisted breeding programs may provide the drought and heat tolerant crops needed to face future climate uncertainty.

In Water Resource Initiatives - There are few emerging issues more important to agricultural production than protection of our valuable water resources. Nowhere is this topic more pertinent than in the Mississippi River Basin where producers and resource planners face challenges dealing with aquifer overdraft and hypoxia in the Gulf of Mexico. Water quantity (water use efficiency) and water quality (sediment and nutrient reductions) are inseparable resources that contribute to the sustainability of irrigated, high intensity agriculture and aquatic ecosystem health within the Mississippi Delta and the Gulf of Mexico. MAFES is building additional capacity to develop and validate new, efficient innovative BMPs for water resource management and transfer water resources management technology to new agricultural landscapes and producers. Sophisticated watershed modeling tools coupled with engineered water delivery systems and irrigation scheduling tools can help producers more efficiently conserve increasingly scarce water resources and reduce environmental impacts of nutrient transport.

In Infrastructure and Operational Costs – Recovery of funding for basic, core operations will allow us to make needed repairs and upgrades to our facilities on campus as well as 16 branch experiments stations across the state. Costs associated with research operations have increased substantially over the last five years and adjustments are needed to maintain quality programs.

In Food Systems and Family Nutrition – A food secure society is dependent on access to safe, affordable, and nutritious food for all members. Food safety is an essential component of food security. Food science involves a myriad of scientific disciplines (microbiology, chemistry, engineering, biochemistry, etc.) to ensure that the food products that reach Mississippi consumers are both safe and meet quality standards. MAFES research is shedding light on how foodborne pathogenic bacteria sense, adapt, resist and recover from different food processing stresses and antimicrobials in foods of animal and plant origin, with the goal of detecting and eliminating pathogens from the human food value chain. Obesity and diet-related diseases (particularly among children) are major public health problems in the U.S. in general and Mississippi specifically. Limited access to nutritious food and relatively easier access to less nutritious food may be linked to poor diets and, ultimately, to obesity and diet-related diseases. MAFES scientists working in the arenas of Food Science, Nutrition, and Health Promotion and Human Sciences are involved in integrative studies of nutrition, dietetics, and human behavior to promote physical and mental health; prevent disease, injury, and disability; and enhance quality of life for Mississippi residents.

We appreciate your consideration of our primary request for recovered funds and mandated benefits increases totaling:
